FRAMEWORK OPS

ENGAGEMENT PROPOSAL / CONFIDENTIAL

DiBara Masonry Operations Engagement

Installing the operating infrastructure to grow past $12M with margin intact.

PREPARED FOR

DiBara Masonry
Office of the CEO

PREPARED BY

Chance Peare
Framework OPS LLC

DATE ISSUED

May 19, 2026

VALID THROUGH

May 26, 2026

ENGAGEMENT TYPE

Fractional COO + Build

COMMITTED AT SIGNING

$4,000 — month-to-month thereafter

(+ optional $3,500 HubSpot Service Hub build)

Framework OPS LLC • chance@frameworkopsllc.com • This proposal is confidential and intended solely for the named recipient.

01 — EXECUTIVE SUMMARY

The right scaffolding, before the next push.

After our discovery conversation on May 19, the picture is clear: DiBara Masonry has built a $12M revenue base on the strength of an owner who is still in the sales seat, a small but capable production team, and a sub-labor model that has scaled with the work. The growth is real. The operating infrastructure underneath it has not kept pace.

The most urgent gaps are **financial visibility** (no job-level costing, no granular COGS), **production-side workflow** (no CRM behind the sales handoff, no clear ownership of work orders, subs ordering materials without DiBara oversight), and **owner sales-dependence** (the company's most important revenue motion still runs through one desk).

None of these are fatal. All of them get more expensive each quarter they go unaddressed. The marketing agency is solving the front of the funnel through HubSpot's Marketing and Sales Hubs. This proposal addresses everything behind it: a fractional-COO retainer to install the financial and operating systems your team needs, and — optionally — a HubSpot Service Hub build to close the production-side workflow gap.

The recommendation: a two-phase core engagement with an optional concurrent phase. Phase 0 is a paid operational diagnostic that confirms — or revises — the scope below before either of us commits further. Phase 1 is an Active fractional-COO retainer at $4,000/month, kicking off in Month 1 immediately after the diagnostic, with **no minimum lock-in** — month-to-month after Month 1. The HubSpot Service Hub build is offered as an Optional Phase, running concurrent with Phase 1 in Month 1, at a bundled rate of $3,500 if you want it; it is not required to begin the retainer. Total committed at signing: **$4,000** base — or **$7,500** if the Optional Phase is taken. Conservative Year-1 value-creation range, stress-tested with a 65% implementation assumption: **$218,000 to $547,000**. The math has to earn its way into Month 2.

02 — WHAT WE HEARD

Five structural gaps, in priority order.

Diagnosis based on the May 19 discovery call. Phase 0 will confirm and quantify each item against your actual financials and operating data.

1. Job costing does not exist at the job level.

Per the conversation, financial review is weekly and covers production and bookkeeping at a P&L level — but jobs are not closed out with a post-mortem, and COGS likely is not broken down to the phase or service-line level. At $12M revenue, that means margin is being measured in aggregate. You cannot tell which job types, which crews, or which sub relationships are profitable and which are eroding the blended number.

> **ESTIMATED IMPACT**
>
> Masonry contractors typically operate at 25–35% gross margin. A 2–4 point margin gap at DiBara's revenue represents **$240,000–$480,000 in annual gross profit** that may not be captured. Pessimistic Year-1 recovery with 65% implementation: $156,000–$312,000.

2. There is no CRM behind the sales handoff.

The marketing agency is standing up HubSpot Marketing and Sales Hubs. That solves lead generation and the sales pipeline. It does not solve what happens after a deal is won — the handoff to production, the work order, the customer-facing project status, the punch-list cycle. Today that workflow lives in tribal knowledge and inboxes.

> **ESTIMATED IMPACT**
>
> Industry data on home-service contractors estimates handoff and rework friction at 0.3–0.8% of revenue. At $12M, that is **$36,000–$96,000 annually** in callbacks, re-mobilizations, and customer-service costs that a well-built Service Hub should compress significantly.

3. Work order ownership is undefined; subs are ordering materials.

This was the single most exposed answer from the discovery call: when asked who creates and tracks work orders, the room could not name an owner. Subs ordering their own materials means DiBara has effectively outsourced one of the largest cost lines on every job — material spec, quantity, supplier choice, and the markup that may sit between the supplier and the sub. Margin will continue to leak until a named owner inside DiBara controls the work order and the material procurement decision.

> **ESTIMATED IMPACT**
>
> Material cost typically runs 30–50% of revenue in masonry/concrete. A 0.5–1.5% revenue improvement from procurement discipline is realistic. At $12M, that's **$60,000–$180,000 annually**. This is a 12–18 month behavioral change, not a 90-day fix — expect partial Year-1 capture of $39,000–$117,000.

4. Sales runs through the owner — and only through the owner.

The six-person sales team (1 inside sales manager + 3 inside reps + 2 field sales techs) is in place, but the owner is still the primary closer and the primary point of escalation. That is a structural single-point-of-failure on the most important revenue motion in the business. Recruiting "killer" reps — even with relocation on the table — does not solve it on its own; new hires inherit the same dynamic unless the team is trained, scorecarded, and accountable to a standard the owner is not personally enforcing in every deal. The lever is not another hire. The lever is a **rigid, formal, documented sales training program** for the existing team (inside and field) and the next hire, with defined scripts, scorecards, ride-along cadence, and weekly performance review — built and installed during the retainer.

> **ESTIMATED IMPACT**
>
> Hard to quantify Year 1; the value compounds in Years 2–3 as the owner steps out of the closer seat. Pessimistic Year-1 model: $0 directly attributable. Upside scenario realized only if the team actually executes the training program and the owner actually lets go of deals.

5. The weekly financial review is reactive, not forward-looking.

The weekly cadence — Matt, bookkeeping, and production at the table — is a strength most $12M contractors don't have. But a backward-looking P&L review without a rolling cash forecast, a job-level margin scorecard, or leading indicators turns the meeting into a status report. The right version of that meeting drives weekly decisions.

03 — PROPOSED SCOPE

Two phases. One optional concurrent phase.

Phase 0 is intentionally first and intentionally paid. It exists so we both know what we're signing up for before either of us commits. If the diagnostic surfaces materially different findings, Phase 1 scope will be adjusted before further dollars are spent. The Optional Phase HubSpot Service Hub build runs concurrent with Phase 1 in Month 1 if elected — take it or skip it without affecting the rest of the engagement.

PHASE 0 OPS Assessment — Operational Diagnostic $997

Timeline: Week 1–2 • **Format:** 90-min live session + document review + 60-min debrief • **Credits to retainer:** Full $997 applied to Month 1 if signed within 30 days.

Deliverables:

- Pre-diagnostic intake form, completed by your team async
- Review of trailing-12-month P&L, current HubSpot configuration, and org structure
- 90-minute live operational diagnostic with you (Matt) and the bookkeeping point of contact
- Written 4–6 page diagnostic report with prioritized problem matrix, quick-win identification, and 90-day roadmap
- 60-minute debrief and roadmap call

This is the gate. Phase 1 and the Optional Phase do not begin until Phase 0 is complete and you have confirmed the scope.

PHASE 1 Active Retainer — Fractional COO Engagement (Month-to-Month) $4,000 / mo

Timeline: Begins Month 1, immediately after the Phase 0 diagnostic • **Commitment:** Month 1 committed at signing; month-to-month thereafter with 30-day notice to end • **Hours:** 15–20 per month • **Cadence:** Weekly 60-min working session + same-day async support.

What gets built and installed during Phase 1:

- **Job costing system:** end-to-end install. Job-level cost capture, post-mortem cadence, margin visibility by service line and crew.
- **COGS structure rebuild in QBO:** in partnership with bookkeeping and aligned with how Matt wants the numbers to read. Granular breakdowns, clean chart of accounts.
- **KPI dashboard:** 8–12 metrics, refreshed weekly, owner inbox Monday morning.
- **Financial review upgrade:** from reactive P&L review to forward-looking decision cadence — 13-week rolling cash forecast, leading indicators, weekly job margin scorecard.
- **Sales training program — rigid, formal, documented:** scripts, scorecards, ride-along cadence, weekly performance review, onboarding playbook for new hires. Goal: the inside sales manager, three inside reps, and two field sales techs run the sales motion to a defined standard — and the next hire steps into a system, not a vacuum. This is the lever that lets the owner step out of the closer seat.

- **SOP development:** 2–3 per month, targeting work order ownership, material procurement, job closeout, estimate-to-contract handoff, dispatch.
- **One automation build per quarter** outside the Service Hub scope (typical candidates: weekly reporting automation, customer review-request flows).

OPTIONAL PHASE **HubSpot Service Hub Build — Production-Side Workflow** **+$3,500**

Status: Optional. Not required to begin or continue Phase 1. • **Timeline:** Runs concurrent with Phase 1 in Month 1 if elected (4–6 week build window) • **Format:** Fixed fee, bundled rate when paired with Phase 1 signing. Standalone scope value $12,500+.

In scope:

- Service Hub ticket schema + pipeline build — core job lifecycle (won → scheduled → in-progress → punch-list → closed)
- 2–3 core automation workflows: Sales→Production handoff, customer acknowledgment, post-job review request
- Basic reporting dashboard for the production manager (pipeline velocity + ticket aging)
- One training session, recorded for future onboarding
- Lightweight documentation handoff (admin guide)
- Sales Hub ↔ Service Hub handoff design, coordinated with your marketing agency

If the Optional Phase is not elected: the production-CRM gap is addressed inside Phase 1 retainer hours over Months 1–3. Slower path to the same end-state, no out-of-pocket build cost.

Explicitly out of scope (either way): HubSpot Marketing Hub and Sales Hub builds (your marketing agency's work). Bookkeeping changes inside QBO beyond the integration touchpoints. Sales recruiting / relocation logistics.

How we work together, week by week.

Engagement Tier

Active Retainer — Framework OPS's most common engagement structure for $3M–$10M operators. DiBara sits on the upper boundary of that band; Active is the right starting tier given the scope of the build. If the Phase 0 diagnostic surfaces a need for deeper integration — direct manager coaching, monthly on-sites, or a more aggressive SOP library buildout — we will formally discuss expanding to Embedded ($6,000/month, 30–40 hours) at the Month 3 review. We will not present that as a default; the diagnostic data will decide.

Why no lock-in

Framework OPS retainers typically carry a six-month minimum because the work compounds and the systems take time to install. For DiBara, given this is a first engagement between us, the retainer runs month-to-month after Month 1 — 30-day notice to end at any point. The bundled Service Hub pricing assumes the engagement continues; if it doesn't, both sides will have learned something. The math has to earn its way into Month 2, every month. That keeps both parties honest.

What's required from DiBara

- **Owner (Matt):** 90-minute diagnostic session, 60-minute debrief, then a 60-minute weekly working session during the retainer. Same-day async availability on critical decisions.
- **Bookkeeping:** 60–90 minutes during Phase 0, then participation in the weekly financial review during the retainer. Read/write access to QBO.
- **Production Manager + PM:** Each available for 2–3 hours during the Optional Phase build (if elected), then for SOP and automation review sessions during Phase 1.
- **Sales Leadership:** Inside sales manager + 1–2 hours per week during the training program build (Phase 1 Months 2–4).
- **Marketing Agency Coordination:** One 60-minute joint scoping call at the start of the Optional Phase to lane-define on HubSpot (if elected). Standing 30-minute monthly sync thereafter if useful.

Communication

Email and a shared project workspace (ClickUp or your tool of choice). Same-day async response during business hours. Anything urgent — text or a 15-minute call.

Timeline

Week 1	**Phase 0 kickoff.** Intake form sent. Document collection: P&L, HubSpot config, org chart, current process notes.
Week 2	**90-min operational diagnostic + debrief.** Report drafted. 60-min roadmap call. Phase 1 scope confirmed. Optional Phase elected or declined.

Month 1	**Phase 1 retainer begins (committed). Optional Phase Service Hub build runs concurrent if elected.** Job costing install kicks off. KPI dashboard scoped. Weekly working session cadence established. If Optional Phase elected: Service Hub pipeline + ticket schema designed; first automation workflows built. *First "continue or wrap" decision point: end of Month 1.*
Month 2	**Phase 1 Month 2.** KPI dashboard live. First two SOPs delivered (work order ownership, material procurement). COGS rebuild underway with bookkeeping. Sales training program drafted. If Optional Phase elected: Service Hub build completed; production manager + PM trained; documentation handoff. *Continue decision.*
Month 3	**Phase 1 Month 3 — Quarterly Review.** First 90-day business review. Tier decision: stay Active, expand to Embedded, or wrap. Margin visibility report from job costing — first real read.
Month 4+	**Phase 1 Months 4 and beyond (month-to-month).** Financial review cadence fully upgraded. Cash forecast live. Continued SOP rollout. Additional automations as identified. Documented handoff happens at any month's end with 30-day notice.

05 — INVESTMENT

$4,000 committed at signing. Optional add-on at $3,500.

Engagement Investment Schedule

PHASE	TIMING	INVESTMENT	PAYMENT TERMS
Phase 0 — OPS Assessment	Week 1	$997	Due on signing; credits to Phase 1 Month 1 retainer
Phase 1 — Active Retainer Month 1	Month 1	$4,000	Billed on Phase 1 kickoff. Month 2+ at DiBara's option.
Less: OPS Assessment credit	Applied Month 1	($997)	Applied when Phase 1 begins
BASE COMMITTED AT SIGNING		**$4,000**	
Optional Phase — Service Hub Build ***(OPTIONAL)***	Month 1 (50%) / Month 2 (50%)	+$3,500	If elected: $1,750 at kickoff, $1,750 on completion
TOTAL IF OPTIONAL PHASE TAKEN		**$7,500**	

Continued retainer: $4,000 per month, billed on the 1st of each retainer month. 30-day notice to end the engagement at any month boundary. No long-term contract. The bundled Optional Phase rate is only available when paired with Phase 1 signing — if elected later as a standalone, scope is repriced at the $12,500 standalone value.

Affordability Check

Using a pessimistic 28% gross margin and 7% net margin against the stated $12M revenue (final numbers will be validated during Phase 0):

METRIC	VALUE	STATUS
Estimated monthly gross profit	$280,000	
Estimated monthly net profit	$70,000	
$4,000 retainer as % of monthly net profit	5.7%	**Within healthy range**
$7,500 committed at signing as % of monthly net profit	10.7%	**One-time, recoverable in Year 1**

06 — ROI FRAMING

Conservative case only. The math has to work without the upside.

Five identified value-creation drivers, modeled at 65% implementation rate. Aggressive cases are excluded. If only two of these five outcomes are partially achieved, the engagement pays for itself in the first quarter.

VALUE DRIVER	LOW ($)	HIGH ($)
1. Gross margin recovery from job costing visibility (2–4 pts × 65%)	$156,000	$312,000
2. Reduced callback & handoff cost (Service Hub) (0.3–0.8% × 65%)	$23,400	$62,400
3. Material procurement discipline from work order ownership (0.5–1.5% × 65%)	$39,000	$117,000
4. Owner time recapture → additional sales productivity	$0	$43,680
5. Cash flow discipline (avoided LOC / late-payment cost)	$0	$12,000
Conservative Year-1 Value Creation Range	**$218,400**	**$547,080**

ROI MULTIPLE (LOW CASE)

~10x

$218K value vs. probability-weighted engagement cost ~$21K — assumes only the lowest-bound recovery on each driver

PAYBACK PERIOD (LOW CASE)

~1.1 mo

At the low-bound recovery, the engagement pays back inside Month 1

Downside disclosures. Every number above assumes your team executes on the systems Framework OPS installs. Margin recovery is a 6–12 month behavioral shift, not a 90-day fix. Material procurement discipline in particular is a 12–18 month change in habits — sub behavior changes slowly. Sales training results compound over quarters, not weeks; the program only works if the team commits to the cadence. If volume contracts in 2026, overhead absorption can offset margin gains. Multiple parties at the table (marketing agency, bookkeeping, Framework OPS, internal management) add 10–15% friction to every timeline. The numbers above are not guarantees — they are the conservative case Framework OPS will be measured against.

07 — NEXT STEPS

One signature. One payment. One scheduled kickoff.

To proceed:

1. Sign the engagement agreement (sent separately upon your verbal "yes").

2. Submit the $997 Phase 0 payment by **May 26, 2026**.

3. Within 24 hours of receiving both, Framework OPS will send the Phase 0 kickoff scheduling link and pre-diagnostic intake form.

This proposal expires on May 26, 2026. If you need more time, let me know — Framework OPS does not re-issue without a follow-up conversation.

Why the OPS Assessment goes first

Standard Framework OPS practice is no proposal without a completed operational diagnostic. The reason: scoping a retainer off a single discovery call is guessing, and the proposal will be wrong. This proposal is structured to preserve that discipline while still giving you the pricing visibility you asked for on the call. If the Phase 0 diagnostic reveals materially different findings, Phase 1 and Optional Phase scopes will be adjusted before further commitment.

What happens if Phase 0 changes the picture

Three possible outcomes after the diagnostic:

- **Confirm:** Findings align with this proposal. Phase 1 and the Optional Phase (if elected) proceed as scoped. (Most likely.)
- **Expand:** Findings reveal deeper need — most commonly an Embedded retainer or a more aggressive financial-system rebuild. Revised proposal issued with explicit scope changes; you decide whether to proceed.
- **Reduce:** Findings reveal that a Sprint or shorter engagement is the right answer. Honest recommendation given; no obligation to continue.

Questions before signing

The most useful next step before you sign is a 30-minute live walkthrough of this proposal. We have the call on the books — same number, same time we used for discovery. Bring questions, especially on scope boundaries with your marketing agency.
