

THREE PATHS FORWARD · PICK YOUR NEXT LEG

Three directions we could take this next.

The outreach system is shaping up well. From here, there are a few different bets we could lean into — and each one's a legit answer depending on what you think the biggest open question is right now. Below are three paths laid out side by side. Read through, see which one matches where your head's at, and we'll talk it through on Monday.

1 PATH 01

Validate Before You Scale

Get real numbers on the funnel before you lean harder into volume.

Lean here if: you want hard data on conversion before pouring more cash and Loom hours into the system.

- 01

Outreach KPI Dashboard
Build the tracking layer: sends, opens, replies, books, shows, closes — tagged by source and offer so we can actually see what's working.
- 02

Unit Economics Model
CAC, LTV, payback — pessimistic / realistic / optimistic scenarios so you know what each pricing structure actually nets you.
- 03

Capacity Ceiling Math
Your personal Loom recording is the real bottleneck. We figure out where Daniel-time caps and what a template-fallback tier might look like.
- 04

Go / No-Go Framework
Written kill criteria and scale criteria. By the time we wrap, you know exactly whether to double down, pivot, or shut it down.

YOU WALK AWAY WITH

A dashboard, a model, and a decision rule. No more guessing at conversion rates.

2 PATH 02

Build the Machine

Lock down the systems so the funnel doesn't crack the day volume scales.

Lean here if: you're confident the funnel will work and want the system underneath it bulletproof.

- 01

Cloud Deployment
GitHub → Railway (backend + API keys) → Netlify (frontend + domain). Multi-device, no more local-only choke point.
- 02

VA Onboarding + SOPs
Hire-ready SOPs for the Colombia VA: Gamma review, Loom embed, send cadence, ClickUp pipeline hygiene. Loom training library included.
- 03

Agentic AI Primer
Hands-on with OpenClaw / Hermes. Stand up a generalist "Chief of Staff" agent. Spec out the first specialist (copy or ad-creator).
- 04

GHL + Zapier Audit
Inventory what's actually live in GHL and Zapier today. Cut the dead weight, prioritize the top three automations to build next.

YOU WALK AWAY WITH

Cloud infra, a VA running on documented SOPs, and a roadmap for agentic AI.

3 PATH 03

Close the Deals

Turn the calls the new system books into signed contracts.

Lean here if: you think volume is sorted and the next bottleneck is converting the calls landing on your calendar.

- 01

Offer Mechanics
When warm leads get PIF vs. monthly. Decision rules, transition triggers, and the script that turns a retainer client into a PIF referral.
- 02

Sales Call Playbook
Discovery → diagnosis → offer → close. Objection handling for B2B ad-creative skeptics. Role-play and review.
- 03

Contract + Pricing Structure
Lock contract language, scope, setup fees, cancellation terms. Templates ready to send same-day from a call.
- 04

Referral Engine
Turn closed retainer clients into PIF referrals. Touchpoint cadence, ask-language, incentive structure, ClickUp tracking.

YOU WALK AWAY WITH

A repeatable sales motion, signed contract templates, and a referral loop feeding warm pipeline.

CHANCE 'S READ

If I had to nudge you toward one, it's Path 01. Right now most of the conversion numbers are still educated guesses, and every decision downstream — pricing, hiring, ad spend — gets better once those numbers are real. Paths 02 and 03 are both solid bets too; they just assume the funnel converts at the rate we hope it does. None of these are wrong answers. They're different bets on what's actually limiting you.

No rush — just come to Monday with a lean. If you want to talk it through live before deciding, that's exactly what the call is for. Bring the question, not the answer.
